

When Someone Gets Sick

CazPAC takes seriously ensuring the health of our staff and campers. We require sick persons to remain home until well as outlined above.

All staff members are trained to identify COVID-19 symptoms and initiate isolation procedures. All staff, campers and visitors are informed of the need to self-identify and initiate isolation procedures if symptoms are present.

Isolating Symptomatic Individuals

If a person displays or reports symptoms of COVID-19 while on site, they are isolated until they leave camp and referred for testing. Campers are kept under adult supervision (health officers) until they leave in the care of a responsible adult. Symptomatic individuals may be grouped with other symptomatic individuals while maintaining 6 feet of social distancing and mask wearing until they leave camp. Isolation will occur on outdoor decks at a safe distance from areas of camp with non-symptomatic individuals, with restrooms available that will only be used by isolated individuals.

Following-up with Symptomatic Individuals

After a person with COVID-19 symptoms leaves camp, CazPAC follows up within 24 hours and remains in regular contact until diagnosis is denied or confirmed.

Notifying Concerned Parties of Confirmed COVID-19 Cases

Once a case of COVID-19 has been confirmed for an individual who was on CazPAC property CazPAC will proceed with haste to identify the exposed group(s) that are impacted, establish the quarantine period. CazPAC will promptly notify the following public health agencies of a positive test result:

- City of Berkeley Public Health Division
- Sonoma County Department of Public Health

CazPAC will also promptly notify the following members of our community:

- All CazPAC employees who were at Camp during the same period as the individual with a confirmed case of COVID-19;
- All CazPAC families with campers who were at Camp during the same period the individual with a confirmed case of COVID-19;
- All CazPAC families with campers scheduled to arrive at the next week's camp

Exclusion of COVID-19 Cases

Where we have a COVID-19 case in our camp, we will limit transmission by:

- Ensuring that campers or staff who are determined to have COVID-19 are excluded from CazPAC until our return-to-camp requirements are met:

- Identifying campers and staff who are considered to have had close contact with positive cases in our camp as determined through basic contact tracing methods. Identified individuals who are not fully vaccinated will be excluded from camp activities and isolated with other campers and staff with similar exposure profiles until a more detailed assessment of the situation can be conducted. Fully vaccinated individuals with close contact to a person considered to have a case of COVID-19 will not be excluded unless they exhibit symptoms.
 - For example—a camper becomes symptomatic and subsequently has a confirmed positive Covid-19 test result. If it has been determined that an individual who was not fully vaccinated had close contact with the confirmed case during the infectious period (within 6 feet for a total of 15 minutes or more over a 24-hour period), that closely exposed individual will be notified and isolated.
- Excluding employees and campers who are not fully vaccinated from the workplace for 10 days after the last known exposure to a COVID-19 case if they do not develop symptoms.
- Notifying parents of campers and staff under age 18 if their children are being isolated.

Providing employees at the time of exclusion with information on available benefits and testing
 Assessing Need for Closure

CazPAC keeps informed on local conditions that may indicate the need to close the camp for staff and camper safety and has developed plans for implementing closure. Depending on the circumstances, a confirmed case of COVID-19 onsite may trigger full or partial closure of camp. The Executive Director and Camp Director, in consultation with health officials and CazPAC staff, makes the determination and orders closure if necessary.
