

## Testing, Screening, and Quarantine

### Screening

All campers and staff are required to complete a screening questionnaire within 24 hours of arrival at camp (or boarding camp transportation), regarding COVID-19 symptoms as well as known close contact with a confirmed COVID case. The questionnaire must be provided to the person responsible for check-in, whether in Berkeley or at camp.

### Symptom Checks

CazPAC will conduct daily symptom checks to monitor the health and well-being of camp staff and campers and monitor campers throughout the day for signs of illness. If a camper is exhibiting symptoms of COVID-19, the camper will be isolated, and staff will notify the parent or guardian and ask them to bring the camper home. Likewise, employees exhibiting symptoms will be isolated until they can leave camp. (see When Someone Gets Sick)

### Testing and Pre-Arrival Quarantine

Campers and staff not fully vaccinated must provide proof of a negative PCR test taken at most 72 hours before arriving at camp. Provide proof of negative test to [emily@cazadero.org](mailto:emily@cazadero.org) AND bring proof on the first day of camp.

All campers, employees, and those in their households should follow [guidance for travelers](#) in the 10 days before camp arrival to reduce exposure to COVID-19. Campers and employees who are not fully vaccinated who travel are required to quarantine and self-isolate for 10 days before coming to camp.

All campers and employees who are not fully vaccinated are required to quarantine at home for 10 days prior to their arrival at camp, and during any time spent offsite (ie. staff's days off).

During our 2-week sessions, screening testing will be done 3–5 days after arrival at camp. Fully vaccinated campers and staff are not required to participate in routine screening testing, but testing may be required in the case of individuals showing symptoms or in close contact with COVID-19 cases.
